Factsheet

Data Security - Data Loss Risk Reduction

Many companies are now completely reliant on the data stored on their network servers, PCs, laptops, mobile devices - or in the cloud. Some of this data is likely to contain either personal information and/or confidential company information.

Here we look at some of the issues to consider when reviewing the security of your computer systems, and how to minimise the risks of data loss. We have a related factsheet which covers some additional considerations for those with data in the cloud, or use some form of outsourcing.

If you would like to discuss how we can assist you, please contact us on 01494 675321 or by email at info@rousepartners.co.uk

There have been many high profile incidents of data loss - where large volumes of personal information have found their way into the public domain. Examples of this sort of information have included health records, financial records and employee details.

A commercial organisation also faces the additional risk of data being lost to a competitor.

Obviously, the larger data losses from government departments and corporations have hit the headlines. However, any company, no matter how large or small can suffer data loss unless sensible precautions are taken.

In the past year alone, according to recent research commissioned by the Department for Culture, Media and Sport (DCMS) some 45% of small/micro businesses have experienced some sort of security breach or cyber attack in the 12 months. The small/micro business survey results can be found here.

The full report encompassing all company sizes can be found here.

Over all sizes of business, the most common types of of breaches were - fraudulent emails (72% of all breaches), viruses and malware (33%), organisational impersonators (27%) and ransomware (17%).

Audit the use and storage of personal data

Consider the potentially sensitive and confidential data which is stored by your business -

- staff records with date of birth, salary and bank account details, medical information etc
- Confidential data is not always conveniently stored in a 'secure' database. Often employees need to create and circulate ad hoc reports (using spreadsheets and other documents) which are usually extracts of information stored in a database. This sort of data retrieval is quite often done at the expense of data security as the database itself invariably will have access controls, but these ad hoc reports usually do not.
- Find out what is happening to data and what controls are in place to prevent accidental or deliberate loss of this information.

- customer and supplier records with bank/ credit card account details, pin numbers, passwords, transaction information, discounts and pricing, contracts information
- financial and performance data and business plans.

Risk analysis and risk reduction

So the key question is - If all or some of this data is lost who could be harmed and in what way? When that is known, then steps to mitigate the risks of data loss must be taken. Here are some steps which can be undertaken to reduce the risk of data loss -

- Undertake regular backups and store backup data securely off-site
- If high risk data is stored in the cloud understand what security mechanisms are in place and how you can retrieve all of this data if necessary
- Review the type of information which is stored on all devices (including laptops, mobiles, tablets, etc) which are used offsite. If such information contains personal and/or confidential data try to minimise or anonymise the data. Ensure that the most appropriate levels of data security and data encryption are applied to this data
- ► If mobile devices are permitted to use company facilities ensure there is an active Bring your own Device (BYOD) policy in place, and appropriate security controls to restrict the type of data that can be stored on such devices
- Ensure that company websites which process online payments have the highest levels of security. This means adopting SSL encrypted transmissions
- Review the use/availability of USB, and other writable media such as optical devices within the company and think about restricting access to these devices to authorised users only, via appropriate security settings, data encryption, and physical controls
- Ensure that company websites and networks are tested for vulnerabilities from attacks
- Have a procedure for dealing with sensitive information and its secure disposal once the data is no longer required
- Have a procedure by which any personal/ corporate data stored on mobile devices can be wiped

- Train staff on their responsibilities, the data security procedures and what they should do if data goes missing
- Train staff to identify roque emails, ransomware and malware, and other potential threats, and the procedures which should be followed.

Security breach

As well as risk reduction, it is also good practice to have procedures in place in the event a security breach occurs.

This should concentrate on four main areas -

- 1. A recovery plan and procedures to deal with damage limitation.
- 2. Recovery review process to assess the potential adverse consequences for individuals, how serious or substantial these are, and how likely they are, to happen again.
- 3. Notification procedures - this includes not only notifying the individuals who have been, or potentially may be, affected. If the security breach involves loss of personal data, then the Information Commissioner (ICO) should be informed. There may be other regulatory bodies and other third parties such as the police, the banks and the media who may need to be informed.
- 4. Post-breach - ensure that appropriate measures are put in place to prevent a similar occurrence and update procedures and train or re-train staff accordingly.

How we can help

If you have concerns about your data security, we can discuss how we are able to support you and provide assistance. Contact us on 01494 675321 or by email at info@rousepartners.co.uk

Trusted advice, imaginative solutions.

It's the old adage that all accountants are the same, but ask yourself this; what kind of service would most add value to your personal or business position? In our opinion, the quality of advice and service is what separates a good accountant from a great one. This is where Rouse Partners can make a difference for you.

Our award-winning team make it their business to get to know you and your specific needs. Whether your goal is to grow your business, increase your personal wealth or improve your work-life balance, by understanding your challenges, we will address them together.

We also know how important it is for you to have a team that you can rely on for timely advice and reassurance. At Rouse, our people are our most important asset and we will select team members who offer an optimum mix of experience, specialism and knowhow. From your Partner, to your Tax Advisor, each team member will be accessible to you or your team and be proactive in seeking solutions.

At the heart of our way of working is a determination to think differently, to challenge the 'status quo' and to ask 'what if?'. Whether you are facing a complex tax, accounting or management situation, we are ready to find a solution.

Contact us today to discuss how we can support your personal or business tax needs:
